

Property Follow-Up

Before / After Repair Follow-Up Workflow

Illustrative sample workflow

A simple visual showing how repairs often drift after they are reported, and what a clearer follow-up route can look like.

Illustrative example only. Not a client case study, software functionality or guaranteed result.

Before: repair follow-up drift

The repair is reported, but control weakens after logging.

After: clearer repair follow-up route

The next step is visible, timed and easier to chase.

This sample does not show software. It shows the follow-up controls that usually matter: one live record, one next owner, one chase date, clear update points and proper close-out confirmation.
